

Marco Nicolas Barzola

Full-Stack Developer

Villa Mercedes, San Luis, Argentina | marcobarzoladev@gmail.com | linkedin.com/in/MarcoBarzola
github.com/MarcoBarzola22

Professional Profile

4th-year Systems Engineering student (UNVIME) specialized in Full-Stack development, complex system architecture, and process automation.

Highly skilled in analytical code review, logic verification, and identifying algorithmic inefficiencies to translate complex technical requirements into scalable solutions.

Proven track record of utilizing AI-assisted tooling (Cursor, Claude Code) to enforce clean code standards, debug complex state management, and ensure optimal computational efficiency.

Education

Universidad Nacional de Villa Mercedes (UNVIME), 4th-Year Student in Systems Engineering Mar 2022 – Dec 2027

- GPA above 7.50/10.0.
- Strong foundation in Algorithms, Data Structures, and System Architecture.

Experience

Full-Stack Developer & Automation Specialist, Freelance / Independent Projects Jan 2024 – present

- Architected and deployed custom end-to-end SaaS solutions and Progressive Web Apps using modern TypeScript/Node.js stacks.
- Conducted rigorous peer code reviews and managed development lifecycles utilizing Agile methodologies (Sprints) and Git feature branching.
- Implemented business automation workflows (n8n) to optimize operational management for corporate clients.

Projects

SmartForge (Strength Training PWA)

- Engineered a Progressive Web App (PWA) driven by a relational biomechanical database to generate auto-periodized routines and audit joint fatigue.
- Developed a scalable architecture using React, TypeScript, and React Query for the frontend, coupled with a Node.js/Express backend.
- Containerized the entire infrastructure, including PostgreSQL instances, using Docker for consistent cross-environment deployment.

FitPlan Desktop (Offline-First SaaS)

- Built an offline-first desktop application utilizing Electron, React 19, and TypeScript to digitize personal training workflows.
- Integrated Prisma ORM binaries directly within Electron to interact with a local SQLite database, ensuring zero-latency data retrieval.
- Implemented reactive state management for instant filtering and lazy financial evaluation to optimize local machine memory resources.

Interactive Digital Menu

- Developed a dynamic management system replacing static menus with real-time stock and category management logic.
- Integrated QR code generation and automated order formatting for direct webhook transmission to WhatsApp.
- Stack: React, Node.js, PostgreSQL, Prisma ORM, Tailwind CSS.

Technologies

Languages: TypeScript, JavaScript, Node.js, SQL (PostgreSQL, MySQL, SQLite), C, Java

Evaluation & AI Tooling: Advanced user of Cursor and Claude Code for code generation, architectural debugging, and logic refinement

Frameworks & Tools: React 19, React Query, Express, Prisma ORM, Electron, Docker, n8n, Git (Feature Branching)

Skills and Languages

Languages: Spanish (Native), English (Intermediate Level B1 - Professional & Technical Proficiency)
