

Marco Nicolas Barzola

Full-Stack Developer

Villa Mercedes, San Luis, Argentina | marcobarzoladev@gmail.com | linkedin.com/in/MarcoBarzola
github.com/MarcoBarzola22

Professional Profile

4th-year Systems Engineering student (UNVIME) specialized in Full-Stack development, complex system architecture, and process automation[cite: 1].

Highly skilled in analytical code review, logic verification, and identifying algorithmic inefficiencies to translate complex technical requirements into scalable solutions[cite: 1].

Proven track record of utilizing AI-assisted tooling (Cursor, Claude Code) to enforce clean code standards, debug complex state management, and ensure optimal computational efficiency[cite: 1].

Education

Universidad Nacional de Villa Mercedes (UNVIME), 4th-Year Student in Systems Engineering Mar 2022 – Dec 2027

- GPA above 7.50/10.0[cite: 1].
- Strong foundation in Algorithms, Data Structures, and System Architecture[cite: 1].

Experience

Full-Stack Developer & Automation Specialist, Freelance / Independent Projects Jan 2024 – present

- Architected and deployed custom end-to-end SaaS solutions and Progressive Web Apps using modern TypeScript/Node.js stacks[cite: 1].
- Conducted rigorous peer code reviews and managed development lifecycles utilizing Agile methodologies (Sprints) and Git feature branching[cite: 1].
- Implemented business automation workflows (n8n) to optimize operational management for corporate clients[cite: 1].

Projects

SmartForge (Strength Training PWA)

- Engineered a Progressive Web App (PWA) driven by a relational biomechanical database to generate auto-periodized routines and audit joint fatigue[cite: 1].
- Developed a scalable architecture using React, TypeScript, and React Query for the frontend, coupled with a Node.js/Express backend[cite: 1].
- Containerized the entire infrastructure, including PostgreSQL instances, using Docker for consistent cross-environment deployment[cite: 1].

FitPlan Desktop (Offline-First SaaS)

- Built an offline-first desktop application utilizing Electron, React 19, and TypeScript to digitize personal training workflows.
- Integrated Prisma ORM binaries directly within Electron to interact with a local SQLite database, ensuring zero-latency data retrieval.
- Implemented reactive state management for instant filtering and lazy financial evaluation to optimize local machine memory resources.

Interactive Digital Menu

- Developed a dynamic management system replacing static menus with real-time stock and category management logic[cite: 1].
- Integrated QR code generation and automated order formatting for direct webhook transmission to WhatsApp[cite: 1].
- Stack: React, Node.js, PostgreSQL, Prisma ORM, Tailwind CSS[cite: 1].

Technologies

Languages: TypeScript, JavaScript, Node.js, SQL (PostgreSQL, MySQL, SQLite), C, Java[cite: 1]

Evaluation & AI Tooling: Advanced user of Cursor, Claude Code, and Lovable for code generation, architectural debugging, and logic refinement[cite: 1]

Frameworks & Tools: React 19, React Query, Express, Prisma ORM, Electron, Docker, n8n, Git (Feature Branching) [cite: 1]

Skills and Languages

Languages: Spanish (Native), English (Intermediate Level B1 - Professional & Technical Proficiency)[cite: 1]
